| You can use: • a ruler (cm/mm) • an HB pencil | | |
|---|--|--|
| Do not use: • a calculator | | |

| | = | | |
|------|-------|------|--|

| Please write clearly in black ink. Do not write in the barcodes. | | | | | | | |
|--|--|--|--|--|------------------|--|--|
| Centre number | | | | | Candidate number | | |
| First name(s) | | | | | | | |
| Last name | | | | | | | |

INSTRUCTIONS

- Use black ink. You can use an HB pencil, but only for graphs and diagrams.
- Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.
- Answer **all** the questions.

INFORMATION

- The total mark for this paper is **140**.
- The marks for each question are shown in brackets [].
- Quality of extended response will be assessed in questions marked with an asterisk (*).
- This document has 32 pages.

ADVICE

· Read each question carefully before you start your answer.

PLEASE DO NOT WRITE ON THIS PAGE

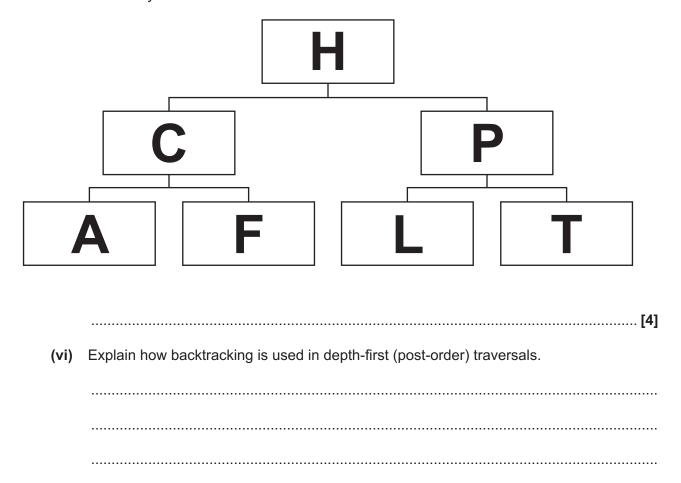

Section A

1

| A tree is | s one example | of a data s | structure. | | | | | |
|-----------|---------------------|--------------|------------|-------------|--------------|------------|-----------------|-----|
| (a) (i) | Give two cha | aracteristic | s of a tre | e data stru | ucture. | | | |
| | 1 | | | | | | | |
| | | | | | | | | |
| | 2 | | | | | | | |
| | | | | | | | | |
| (ii) | The following | g data is er | ntered int | o a binary | search tre | e. | | [2] |
| | 22 | 13 | 5 | 36 | 55 | 14 | 8 | |
| | Draw the bin | ary search | tree whe | en the give | en data is e | entered in | the order giver | l. |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | [4] |

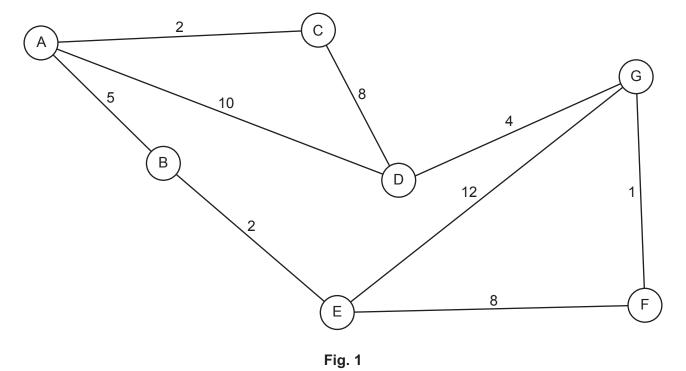

| (111) | Describe how a leaf node is deleted from a binary search tree. | |
|-------|---|-------|
| | | |
| | | |
| | | |
| | | . [2] |
| (iv) | Describe how a binary search tree can be searched for a value. | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | [4] |

(v) Identify the order that the nodes will be visited in a **depth-first (post-order)** traversal of this binary search tree.

(b) A graph is another type of data structure.

An example graph is shown in Fig. 1.

Show how Dijkstra's algorithm can be used on the graph shown in **Fig. 1** to find the shortest path from start node A to end node G.

| You must state the nodes or | n the final path and the distance | of this path. Show your working. |
|-----------------------------|-----------------------------------|----------------------------------|
| You may use the table below | v to give your answer. | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| Final path: | | |
| Distance: | | · · |

A company needs a new computer program that will create schedules for delivery drivers. It will need to identify a possible order that the drivers can deliver items and possible routes they could take.

Discuss how programmers could make use of problem recognition and problem decomposition when designing this system.

You should include the following in your answer:

- a description of both problem recognition and decomposition

| • | the benefits of using each method when designing the solution. | [9] |
|---|--|-----|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

|------|------|--|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

3 A program stores data in a linked list.

The current contents of the linked list are shown in Fig. 3, along with the linked list pointers.

| | | location | data | pointer |
|--------------|---|----------|----------|---------|
| headPointer | 1 | 0 | "blue" | 6 |
| eListPointer | 4 | 1 | "red" | 0 |
| | l | 2 | "green" | 8 |
| | | 3 | "orange" | NULL |
| | | 4 | | 5 |
| | | 5 | | 7 |
| | | 6 | "grey" | 2 |
| | | 7 | | 9 |
| | | 8 | "purple" | 3 |
| | | 9 | | NULL |

Fig. 3

| (a) | State the purpose of headPointer and freeListPointer in the linked list shown in Fig. 3. |
|-----|---|
| | headPointer |
| | |
| | freeListPointer |
| | rei |
| (b) | State the meaning of the pointers with the value \mathtt{NULL} in the linked list shown in Fig. 3. |
| | [1] |
| (c) | A procedure outputs the data in the linked list shown in Fig. 3 from the first item in the list, to the last item. |
| | Give the output from the procedure. |
| | |
| | [2] |

| (d) | A new item needs to be added to the linked list. |
|-----|--|
| | Describe how a new item is added to a linked list. |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | [4] |
| (e) | The function findNode will search the linked list and return either the position of the node that contains the data item, or -1 if the data item is not found. |
| | The data held in a node at location x can be accessed with $linkedList[x]$.data. The pointer of the node at location x can be accessed with $linkedList[x]$.pointer. |
| | For example, using the linked list shown in Fig. 3: linkedList[2].data returns green. linkedList[2].pointer returns 8. |
| | Complete the function, using pseudocode or program code. |
| | <pre>function findNode(toFind, headPointer, linkedList)</pre> |
| | currentNode = |
| | <pre>while(currentNode !=)</pre> |
| | <pre>if linkedList[currentNode]. == toFind then</pre> |
| | return currentNode |
| | else |
| | <pre>currentNode = linkedList[].pointer</pre> |
| | endif |
| | endwhile |
| | return |
| | endfunction [5] |

- 4 A programmer has designed a program that includes a reusable program component.
 - (a) The reusable program component is a function called <code>isInteger()</code>. This will take a string as an argument and then check that each digit is between 0 and 9. For example if 103 is input, it will check that the digits 1, 0 and 3 are each between 0 and 9.

The asc() function returns the ASCII value of each digit. For example asc("1") returns 49.

The ASCII value for 0 is 48. The ASCII value for 9 is 57.

```
01
     function isInteger(number)
02
       result = true
03
       for count = 0 to number.length-1
04
         asciiValue = asc(number.substring(count, 1))
05
         if not(asciiValue >= 48 and asciiValue <= 57) then
           result = false
06
07
         endif
08
       next count
09
       return result
     endfunction
10
   Identify one identifier used in the function isInteger().
    .....[1]
(ii) Give the line number where the branching (selection) construct starts in the function
    isInteger().
    .....[1]
(iii)
   Give the line number where the iteration construct starts in the function isInteger().
```

| (b) | Describe the purpose of the following lines in the function <code>isInteger()</code> . |
|-----|--|
| | Line 03 |
| | |
| | Line 04 |
| | |
| | Line 09 |
| | |
| | [3] |
| (c) | Give two reasons why reusable program components are used in programs. |
| | 1 |
| | |
| | 2 |
| | |
| | [2] |

| 5 | A re | recursive pseudocode function, recursiveAlgorithm(), is shown. | | | | | | |
|---|------|---|--|--|--|--|--|--|
| | 01 | function recursiveAlgorithm(value) | | | | | | |
| | 02 | if value <= 0 then | | | | | | |
| | 03 | return 1 | | | | | | |
| | 04 | elseif value MOD $2 = 0$ then | | | | | | |
| | 05 | return value + recursiveAlgorithm(value - 3) | | | | | | |
| | 06 | else | | | | | | |
| | 07 | return value + recursiveAlgorithm(value - 1) | | | | | | |
| | 08 | endif | | | | | | |
| | 09 | endfunction | | | | | | |
| | (a) | Describe the key features of a recursive algorithm. | | | | | | |
| | | You may refer to the function, recursiveAlgorithm() in your answer. | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

.....[3]

| (b) | Trace the recursive function, recursiveAlgorithm when called with recursiveAlgorithm(10). You make your answer. | | |
|-----|---|-------|--------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | Function call | value | return |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Final return value

[5]

6 Octal is a base 8 number system.

To convert a denary number to base 8:

- the denary value is divided by 8 and the remainder is stored
- the integer value after division is divided by 8 repeatedly until 0 is reached
- the remainders are then displayed in reverse order.

| Example 1: Denary 38 | | |
|-------------------------|---|---|
| • | 38 / 8 = 4 remainder 6 4 / 8 = 0 remainder 4 | 6 |
| Octal = 46 | 4 / 6 – 0 remainuer 4 | 4 |
| Example 2: Denary 57 | | |
| · | 57 / 8 = 7 remainder 1 7 / 8 = 0 remainder 7 | 1 |
| Octal = 71 | 7 7 0 - 0 Terriainder 7 | , |

Write an algorithm to:

- · take a denary value as input from the user
- convert the number to octal
- output the octal value.

You do **not** need to validate the input from the user.

| write your algorithm using pseudocode or program code. |

7* (a) A program designer needs to decide on an algorithm to use from a choice of three. The table shows the worst-case Big O complexities for each algorithm.

| Algorithm | Time Complexity | Space Complexity |
|-----------|-----------------|------------------|
| 1 | Linear | Exponential |
| 2 | Exponential | Constant |
| 3 | Logarithmic | Logarithmic |

The program will be used to analyse data that can range from 2 items to 2 billion items.

Compare the use of all **three** algorithms and suggest which the programmer should use.

You should include the following in your answer:

- the meaning of constant, logarithmic, linear and exponential complexity
- how well each algorithm scales as the amount of data increases

| which algorithm is the most suitable for the given task. | [9] |
|--|--------|
| | |
| | |
| | ······ |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

| | |

| |
|------|------|------|------|------|------|------|------|------|------|
| |
| |
| |
| | | | | | | | | | |

(b) The program designer is investigating the use of concurrent processing.

| (i) | Describe what is meant by the term 'concurrent processing'. | |
|------|---|---|
| | | - |
| | | |
| | | |
| | [2 |] |
| (ii) | Give two benefits of using concurrent processing. | |
| | 1 | - |
| | | - |
| | 2 | - |
| | [2 |] |

(c) The programmer needs to use a merge sort in one part of the problem to sort items in

| asc | ending order. |
|------|--|
| (i) | Describe how a merge sort works. |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | [5] |
| (ii) | Give one benefit and one drawback of the programmer using a merge sort instead of a bubble sort. |
| | Benefit |
| | |
| | Drawback |
| | [2] |

(d) The programmer uses an Integrated Development Environment (IDE).

Complete the table by identifying **and** describing **three** IDE features that can help the programmer to develop, or debug a program.

| IDE feature | Description |
|-------------|-------------|
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

PLEASE DO NOT WRITE ON THIS PAGE

Section B

| 9 | A text-based computer game allows a user to dig for treasure on an island. The island is |
|---|---|
| | designed as a grid with 10 rows and 20 columns to store the treasure. Each square is given an |
| | x and y coordinate. Some of the squares in the grid store the name of a treasure object. Each |
| | treasure object has a value, e.g. 100 and a level, e.g. "Bronze." |

(a) The computer game makes use of abstraction.

| (i) | Describe what is meant by the term abstraction and give an example of how abstracan be used in the treasure game. | ction |
|------|---|-------|
| | Description: | |
| | | |
| | | |
| | | |
| | Example: | |
| | | |
| | | [3] |
| (ii) | Give three benefits of using abstraction when writing a program. | |
| | 1 | |

2

3

[3]

(b) The treasure game is being programmed using an object-oriented paradigm.

A class, Treasure, is used to store the treasure objects.

You do **not** need to write the get methods.

The design for the Treasure class, its attributes and methods is shown here.

| class: Treasure |
|--|
| attributes: private value : integer private level : string |
| methods: new() function getValue() function getLevel() |

(i) The constructor method takes a value as an integer, e.g. 100, and a level, e.g. "bronze", as parameters and assigns these to the attributes.

Write pseudocode or program code to declare the class Treasure.

You should define the attributes and constructor method in your answer.

| Ŭ | |
|---|-----------|
| | |
| | |
| | |
| | . |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

| (ii) | The get method getLevel() will return the appropriate attribute. |
|-------|---|
| | Write the method <code>getLevel()</code> using either pseudocode or program code. |
| | |
| | |
| | |
| | |
| (iii) | Describe the object-oriented programming technique being used in part 9(b)(ii). |
| | |
| | |
| | [2] |

(c) A class, Board, is used to store the 10 row (x coordinate) by 20 column (y coordinate) grid.

The design for the Board class, its attributes and methods is shown here.

```
class: Board
attributes:
private grid : Array of Treasure

methods:
new()
function getGridItem(x, y)
function setGridItem(x, y, treasureToInsert)
```

The constructor initialises each space in the grid to a treasure object with value as -1 and level as an empty string.

Complete the following pseudocode for the constructor method.

[5]

- (d) A procedure, guessGrid():
 - takes a Board object as a parameter
 - accepts the row (x) and column (y) coordinates from the user
 - outputs "No treasure" if there is no treasure found at the coordinate (level is an empty string)
 - if there is treasure at that coordinate, it outputs the level and the value of the treasure in an appropriate message.

| Describe two benefits of using an object-oriented paradigm rather than a procedural paradigm. 1 | VVI | ite the procedure guessGrid() using either pseudocode or program code. | |
|---|------|--|------|
| Describe two benefits of using an object-oriented paradigm rather than a procedural paradigm. 1 | •••• | | |
